

Company Description

Corporate Profile

TRESS AS was established on 1 June 1982 with headquarters in Skanderborg, Denmark. We are a Scandinavian trading company whose mission is to always be the leading supplier of quality sports and activity equipment in all Nordic countries.

We want to develop and sell environmentally friendly products promoting a culture of physical activity based on positive human interaction, sustainability, health, and experiences.

Product Portfolio

We have a wide product portfolio comprising balance and motor exercise accessories, bicycles for institutional use, balls, goals and nets, school sports equipment, equipment for swimming pools, sports centres, race tracks, playgrounds, and fitness and health centres.

TRESS cooperates only with quality-conscious, cooperative, and development-oriented equipment suppliers. Product optimisation and close and good communications come as a matter of course in our cooperation. We place tough requirements on our suppliers, the vast majority of whom hail from Europe.

The product portfolio is presented both in our many catalogues and on our website, www.tress.dk.

Customer Service – Professional Competence and Quality Service as a Matter of Course

We have professionally competent staff who tend to all customer contacts with a smile. Good customer contact and good customer care are at the basis of our brand since we want to be a responsible and reliable supplier of sports, play, and training equipment. We want to be known for best quality, secure and punctual delivery, and high quality service, which is why offering optimum customer service comes a matter of course to us.

Consulting Services

Our 10 regional consultants and our internal salespersons are all well-trained. They are always available and can provide good advice and guidance, thereby giving our customers the greatest security possible that they will pick the optimum product for them.

Customers may order free consulting in our products, and we will gladly present them and tell about their use, durability, etc. We provide professional consulting in connection with projects, construction work, new construction or reconstruction, and even with grant applications and leasing.

Development and Project Tasks

TRESS applies a targeted approach to creative processes and networking. We develop new concepts, customise products, and present an overview of ideas for new development in close cooperation with our customers. The best ideas and results arise in close interaction with end-users, customers, producers, and our own employees. TRESS therefore always has the newest knowledge about activities and equipment – and can thereby offer innovative and unorthodox solutions.

We have a great experience in development assignments and construction projects, and our thorough and professional preparation allows us to offer new types of quality facilities and rooms for play and sports.

Administration and E-Commerce

Our administration is located in Skanderborg where we manage our finances, accounting, telephone sales, and e-commerce. This is also where we administer the website that presents our products and an online store where you can shop online.

The Warehouse in Skanderborg – Immediate Delivery

We have a big, modern, and efficient warehouse in Skanderborg with an area of approximately 6,000 square metres, which has more than 3,500 different products on its shelves. Most of our products are therefore ready for quick delivery all over the country. The delivery time for stocked items in Denmark is 2 to 3 days after ordering, whereas the delivery of special items takes slightly longer.

Goods are safely packaged to prevent any damage to them during transportation. We have our own trucks, but also cooperate with leading carriers. This enables us to guarantee punctual delivery and products that are both whole and in perfect working order on arrival. We also have high-quality and well-functioning logistics.

The Installation Department – Supreme Safety

Our six fitters are equipped with all necessary equipment for performing varied tasks. Our installation trucks are fitted with the newest equipment and the best tools available on the market. We work, for example, with posthole diggers, mini excavators, water jet cutters for concrete and asphalt, magnetic drills for steel structures, laser measurement and levelling.

The installation tasks are carried out in accordance with the customers' desires and in compliance with all regulations, safety rules, acts, and international standards. We never compromise on safety requirements.

The installation team is made up of competent and serious professionals, with great experience in sports facilities and playgrounds, who perform a variety of tasks, from new construction, through safety inspections to repairs and modifications. Work in the installation department is guided by principles such as safety, common sense, helpfulness, empathy, and adaptation in solving individual tasks.

Environmental Management – Sustainability

We were environmentally certified according to the ISO 14001 standard in November 2009 by Bureau Veritas.

Validity area: Development, purchasing, and sale of sports and activity equipment.

The ISO 14001 environmental management was introduced in order to ensure continual improvement of our environmental work based on statutory and other requirements, but also on our own requirements and expectations. Our environmental policy is supposed to guarantee the sustainable development of TRESS by minimising CO2 emissions, waste, and energy consumption.

Quality Assurance

We expect our suppliers to live up to the applicable statutory requirements to product content and safety and health at all times. We expect our suppliers to produce under conditions that meet the local acts and regulations.

TRESS is always looking for long-term cooperation with our suppliers to ensure optimum understanding for our environmental, quality and delivery reliability requirements.

Employees:

We make a point that all of our employees are well-trained and professionally competent. We are a company where there is a good working climate and where employees feel appreciated. We make a point of being a place of learning, and over time we have trained many trainees and apprentices. We always have trainees among our employees, and we demonstrate our social commitment by hiring employees with a reduced ability to work in flexible jobs and internships.
